1			New features of i-PRO Active Guard have been released providing dramatic efficiency in Forensic search with edge AI analytics.	New i-PRO Active Guard features have been released, providing outstanding efficiency in forensic search with edge AI analytics.	
2		1. Enhanced search function 2. Transforming Non-AI to AI camera 3. Dashboard Flexibility	New Analytics, enabling AI on existing systems, and data visualization by the newly released version bring further improvements to Forensic search, Realtime operation, and the Buisness Intelligence tool.	1. Enhanced search function 2. Transforms non-AI to AI camera 3. Dashboard flexibility  New analytics, enabling AI on existing systems, and data visualization in this newly released version bring further improvements to forensic search, real-time operations, and the business intelligence tool.	
3-1		Enhanced search functions - More search attributes  Bag Shoes Bag/shoes color	People search function has now been further improved. It now additionally supports some attributes, which is bag and shoes and their colors, allowing users to search specific individuals and register them to watchlist in a wider range of situations.	Enhanced search functions - More search attributes  Bag Shoes Bag/shoe color  The People Search Function has been upgraded. It now supports bag and shoe attributes along with their colors, allowing users to search for specific individuals and register them on a watch list in a broader range of situations.	
3-2		Enhanced search functions - Vaxtor LPR/MMC  Licence plate Maker Model Color	In addition to i-PRO in-house apps, we are also working with Vaxtor to support License Plate Recognition. Not only license plate numbers, it can detect brand, model, color, country, and direction. i-PRO Active Guard contributes the optimization of surveillance through alarm notifications based on the watchlist and search for specific vehicles.	Enhanced search functions - Vaxtor LPR/MMC  Licence plate Make Model Color  In addition to i-PRO in-house apps, we are also collaborating with Vaxtor to support License Plate Recognition. Not only can i-PRO Active Guard identify license plate numbers, it can also detect brand, model, color, country, and direction. i-PRO Active Guard contributes to optimizing surveillance by issuing alarm notifications based on a watch list and specific vehicle searches.	
3-3			We also support a variety of partner applications. Vaxtor OCR Genesis, a high-performance general-purpose OCR reader Vaxtor OCR Container, an ISO container code recognition application  Fire and smoke detection developed by Noema provides you detail analysis such as size and color. Slip and fall detection powered by Morpho AI Solutions, it can also detect wheelchairs and white canes. You can identify if a person is wearing a safety vest or helmet with an application developed by Panasonic R&D Centre Singapore.  With i-PRO Active Guard and camera SDKs, partner applications are automatically integrated with Genetec, Milestone, and Video Insight. Metadata is sent to the Active Guard server, and you can receice notifications on VMS side.	Fire and smoke detection developed by Noema provides you with a detailed analysis, such as size and color. Slip and fall detection, powered by Morpho AI Solutions, can detect wheelchairs and white canes. You can identify if a person is wearing a safety vest or helmet with an application developed by Panasonic R&D Centre Singapore.  With i-PRO Active Guard and camera SDKs, partner applications are automatically integrated with Genetec, Milestone, and Video Insight.	
3-4		Enhanced search functions - Optimizes analytics by on-site learning	It is not possible to detect objects which have not been trained beforehand. Now you can enjoy further advancement which detects target as you like. With i-PRO's AI On-site Learning App, you can learn what you want to detect movement, and manage and search for detection events by registered name.	It is challenging for a conventional camera's AI-VMD to recognize and detect specific objects accurately. With the i-PRO AI On-site Learning App, you can train your camera to perform more in-depth detection. The app combined with AI-VMD, allows you to recognize specific objects and people, detect movement, and search by a registered name.	
4		Transforming Non-AI to AI camera	AI functionality is not available with existing surveillance systems. We, i-PRO can solve that problem with AI Procесing Relay app. With the new X-series cameras and i-PRO Active Guard, up to 3 non-AI cameras can be turned into AI cameras. You can use search functions and real-time alarm for them as well as normal AI camera. Of course, X-Series cameras themselves can also use AI functions.	Transforming non-AI to AI camera  If your exisiting surveillance systems do not include AI functionality, i-PRO can solve that problem with our AI Processing Relay App.  With the new X-series cameras and i-PRO Active Guard, you can turn up to 3 non-AI cameras into functioning AI cameras that can perform search functions and utilize real-time alarms just as well as a normal AI camera. Of course, X-Series cameras themselves also use AI functions.	
5		shboard flexibility	The Dashboard works with the AI application on camera side to visualize detect information in real time. Now, the minimum interval becomes 5 seconds.  In addition, the dashboard supports statistical display of stored data. Queue Management display has been added in the new version, making it easier to analyze busy times.	The dashboard works with the AI application on the camera to monitor and detect information in real time at a minimum of 5-second intervals.  In addition, the dashboard displays graphs and charts of stored data, and a queue management system has been added to this new version, making it easier to analyze busy times.	
6			Advanced search functionality, Enabling AI functions on non-AI cameras, and enhanced dashboard functionality --  With these new features, i-PRO Active Guard will support users' surveillance operations at a higher level and help create a safe and secure environment i-PRO Active Guard system keep evolving.	Advanced search functionality, enabling AI functions on non-AI cameras, and enhanced dashboard functionality  With these new features, i-PRO Active Guard will support users' surveillance operations at a higher level and help create a safe and secure environment. i-PRO Active Guard keeps evolving!
